

Stock Market Tracking Record

Directions:

1. Transfer stock names and number of shares from the previous week's tracking chart to the new chart.
2. Using the link provided on *Google Classroom*, locate each of the stocks in your portfolio. Look at the **Open** column of the stock table. This section indicates the opening selling price of that particular stock for the trading day. Record the price under the *Price Per Share* column on the new tracking chart.
3. Calculate the new investment values for each individual stock. Multiply the stock's price per share and number of shares. Record the answer in the *Value of Individual Stock Investment* column.
4. To find the new value of your team's stock portfolio, add the numbers in the *Value of Individual Stock Investment* column. Record the answer on the *Total Portfolio Value* row.

Tracking Chart

Stock Name	Price Per Share	Number of Shares (this # never changes)	Value of Individual Stock Investment
Dutch Bros	52.34	48	2512.32
Microsoft	405.84	5	2029.2
McDonald's	327.03	6	1962.18
Delta Airline	59.53	28	1666.84
			8170.54

- Search for a current news story about an investment that has performed well or one that has disappointed. Summarize the article, paying close attention to indicators that may help explain the stock's performance. (3-4 sentences)
